

Electronic Data Collection: A practical guide to using XLS forms, ODK and Enketo

Entering data

You are now ready to enter some data. To do this on Enketo, click on the Enketo button under 'webform' on the server. You can also save this web address to send to others or bookmark it for use later.

To view use on ODK on an Android tablet or Smartphone, first download the ODK Collect application from the Google Play store. Once you are in the application click on the three vertical dots in the top, then 'general settings' and 'server'. Here add the URL of the server and the username and password if needed to download the forms. Obtain the form by going to 'Get Blank Form' and tick the box for the form then 'get selected'. Next go to fill blank form and select the form. You can now fill it in. Once finished, go to 'send finalized form' and select the form to send.
